- is educated for sustainable development and active participation in democratic society, which includes self-knowledge and a responsible attitude towards the self, own health, other people, own and other cultures, the natural and social environment, future generations;
- develops a spirit of enterprise, innovation, creativity.

Assessment and completion

System of assessment:

In the first triad (years 1–3) and second triad (years 4–6), students' knowledge is assessed using descriptive assessments, and in the third triad (years 7–9) using numerical grades.

National assessment:

At the end of the second and third triads, students' knowledge is tested by means of national assessment, which is designed to verify the standards of knowledge set out in the curriculum. Testing is voluntary.

The results of national assessment serve as additional information on students' knowledge.

Progression

Students in the first and second triads do not repeat years. Third-triad students progress to the next year if they achieve a positive assessment in all subjects at the end of the academic year.

Condition for obtaining certificate

Basic schools issue certificates to students at the end of each year.

Basic schools issue school leaving certificates to students who complete basic education.

The school leaving certificate of a student who completes an adapted education programme with lower educational criteria contains the student's year 9 grades.

If the student passes over to the basic school education programme for individual subjects, this is stated in the school leaving certificate.

Awarding body

- Basic school (with special departments or units with adapted programme).
- Basic schools with adapted programme.
- Education centres for children with special need.

Home education possible.
